

QUAD HELIX

What does it do?

This upper arch expansion appliance expands the dental arch only. The light force the appliance applies, allows expansion of the dental arch.

What does it look like?

Quad helix loops

It is comprised of four quad helix loops and two wire extensions soldered to two molar bands on the tongue side of the bands.

This cemented appliance may need to be removed and re-cemented on occasion to allow the doctor to make adjustments. The appliance will remain in place for approximately three to six months.

What are my responsibilities?

- Please avoid sticky and hard foods.
- Remember to floss daily and brush three times a day or after every meal and snack.
- If your appliance become loose or you suspect a breakage, please contact our office.

There is a fee for lost or broken appliances.
